ENHANCED TRANSACTION
PERFORMANCE

As an extension to our existing Payment Gateway, our newly developed Standalone Gateway offers numerous enhanced features and customer options.

Providing a wide variety of payment processing solutions, we empower our partners to accept deposits, transfers, and withdrawals for digital gaming, including Card Payments, e-wallets, bank transfers and Crypto payments, giving the players freedom of choice to perform online transactions safely, wherever they may be.

Continually expanding our global reach and portfolio, we intend to offer the very best payment options for operators, providing our partners with **HIGH PERFORMANCE** and **OPERATIONAL EFFICIENCY**.

The variety of enhanced features we offer will bring significant extra value to your Payment processes. **These include:**

AUTO RECONCILIATION

Transaction accuracy and timely updates are essential to any business. Our newly built “Auto reconciliation” is designed to automatically check and reconcile transaction statuses with providers and ensure delivery of IPNs to merchant platforms. This automatic feature is designed to increase transaction accuracy and customer satisfaction.

TRANSACTION
FLAGS & MANUAL UPDATES

Transaction flagging is a mechanism to mark transactions when an outstanding condition has occurred and manual interference is required. Transaction flags help filter out problematic cases quickly and provide options to solve them manually.
