NEW AI- POWERED PERSONALIZED RECOMMENDATION ENGINE

Being focused on user retention and innovative methods of customer acquisition, we have developed our new feature - an AI-powered personalized event recommendation engine based on player's behavior.

Our new AI-based algorithm forecasts and gives game recommendations for pre-formed groups of users, for events they might be interested in.

Behavioral exploration is based on many criteria, including:

- The Bets that Players Make
- The Number of Bets Made on Certain Events and Championships
- The Events that the Players Bet on

The system contains special recommendations for new registered users based on the personal information, including region, age and gender, before analysis of their betting behavior.
